Thanks Jim. I suggest we have KJ provide catch location maps by the end of each week or as needed to help with problem catch areas decisions. Ideally, it would include areas where they've caught fish and areas where they attempted and were unsuccessful.

thanks
Chip

Subject: Revised SAP Figure 3-1 for the 2012 Smallmouth Bass Effort

Chip, just an FYI that the revised figures for the fish sampling effort have been posted to the shared server (see the file link below). These figures depict the changes we discuss in mid-August as part of the final approval, namely:

1. One sample was added in the vicinity of RM 2-3E, and the 11 total samples were spread out towards Schnitzer.
2. One sample was added in the head of Schnitzer slip.
3. One of the samples near Multnomah Channel was moved into the channel.
4. One sample was added near the Port of Portland Auto Terminal between where two EPA samples were collected in 2011.
5. One sample was added in Swan Island and the samples were spread out.
6. The samples on the river side of Swan Island were spread out to cover more area.
7. One sample was added between Gunderson and the Fire Boat Cove and the samples were spaced out evenly between those two areas.

A total of 5 samples were added, which means the total number of proposed fish to be collected is 110.

Please let me know if you have any questions. Thanks, Jim.
